Reference: Vulcanite Pty Ltd. – Australia.

The MainTrain facility is the principal supplier of rolling stock maintenance services to the State Rail Authority of NSW in the Sydney region. The suburban and intercity fleet of State Rail passenger vehicles and bogies is fully overhauled by MainTrain, along with other suburban, freight and locomotive bogies.

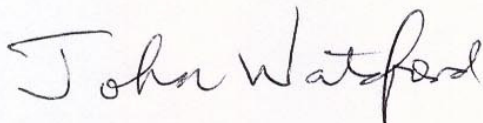

To ensure on-time quality delivery of vehicles to our customers, MainTrain has developed a reliable group of component and service suppliers to assist in the provision of the overall maintenance service. Vulcanite is one of these valued suppliers.

Over the last eight years Vulcanite has not only supplied Resilient Bogie Components and inter vehicle Gangway Seals, they have also assisted our engineers in product improvement and new product development. Some of the items which fall into these categories are:

- Tangara Gangway Seals
- Light Rail Vehicle Chevron Springs
- Traction Motor Pads and Bushings, and more recently
- Passenger Vehicle Primary Suspension Rolling Ring Springs.

We are pleased to recommend Vulcanite Australia as a competent, ethical, and reliable supplier of rolling stock components.

Yours sincerely

John Watsford. F.I.E. Aust CP Eng.
